Name of coodinator:			Per Ole Frederiksen				Year, quarter:				3. quarter 2018		
Community:	Attu.						Trend*				Comments regarding number, size of hunted animals, first/last observed, etc.	Significans and possible explanation of trend*	Management recommendation (elaborate eventually on separate sheet)
Species/ impact	Month	Locality	Total number of trips	Number seen	Caught in all	Method	Unchanged	More	Less	Dont know			
Atlantic Cod	Jul	Attu	120		107 tons	Bund-garn		X			This year, many small cod have been observed swimming in the bottom nets. This year we catch cod with bottom nets at several different places	At Attu, lots of capelin have been observed (ammassat samut sage (putooruttut)). Even the cod eat while in their fenced net.	It is recommended to limit the fishing pressure in certain areas, as we have experience with excessive fishing pressure in certain places.
	Aug	Attu	110		35 tons	Bund-garn		X					
	Sep	Attu	115		135 tons	Bund-garn		X					
Seal	Jul	Attu	120	36000	8	Qooror-tooq		X			This year, larger stocks of harp seal were observed compared to previous years.	There must be plenty of food (Capelin and Northern Sand Lance) at Attu.	If stable fishing is wanted it is recommended to reduce the stock of seals.
