Coordinators name:			Per Ole Frederiksen				Year, quarter:				1. quarter 2019		
SettlementBygd:	Attu.						Tendency*				Comments about number, sizes of trapped animals, first / last observed, etc.	Possibly. meaning and possible explanation of trend *	Recommendation for the administration (possibly expand on separate sheet)
Nature/ influence	Month	Locality	Total number of trips	Total num-bers of seen	Catched in all	Method	Uncharged	More	Fewer (less)	Dont know			
Walrus	Jan	Attu	120	400+				X			Compared to the previous years, several walruses are observed close to the coast at the beginning of the year, this year more and closer to the coast are observed.	One of the biggest reasons is probably that this year there are no trawlers west for Attu.	Recommendation is that the catch of walrus is opnened 01.01. In that case, it is recommended that the municipality of Qeqertalik starts distributing two licenses for one hunting trip.
	Feb	Attu	90	300+				X					
	Mar	Attu	120	50+	2	Rifle		X					
Reindeer	Jan	Attu	120	0						X			It is recommended that the management of winter hunting of reindeer is based on local knowledge. Once again this year we saw that the hunting time af reindeer "only" was based on Nuuk knowledge. Due to climate change it is impossible to travel around with dog sledge and even with the dinghy, as the ice is constantly moving.
	Feb	Attu	90	2						X			
	Mar	Attu	120	0						X			
Beluga and narwhale	Jan	Attu	120	100+				X			This year we have seen more, why we do not know. Same conditions.	One is afraid that the ecosystem would be affected due to the very strict management of beluga and narwhals	
	Feb	Attu	90	300+				X					
	Mar	Attu	120	900+				X					
Ice, weather, etc.	Jan	Attu	120								Last year at the beginning of the year, we pointed out that the sea has become colder. This year it has changed. In short, the warm ocean impact is stronger. The ice in the fjords is thinner and the west ice is rather thin compared to old times. Even there is no ice in some fjords. Regardless of these signs, we are sceptical, as signs that we have been told about from our ancestors and from our fathers are that when the sea has becomes colder, then there are mpre ring seals. There are plenty of ringseals around Attu, especially at the beginning of the year. So it is very difficult to assess whether sea warming continues. The ice is thinner but the stock of ring seal has increased
