Coordinator's name			Per Ole Frederiksen				Year, quarter				2019 3Q (page 2 of 2)		
Community (bygd)			Attu				Trend						
Species/impact	Month	Location	Total number of trips	Total number seen	Total catch	Method	No changes	Increasing	Decreasing	Don't know	Comments about number seen, size, first/last oberved, etc.	Significance and possible explanations of the trend	Recommendations for the management (perhaps explain on the seperate sheet
Humpback Whale	7	Attu							x		This year was different. Whales were observed between the islands. No humpback whales or other whale species.	Possibly no food basis between the islands and perhaps because of the huge population of jellyfish.	No recommendations
	8	Attu							x				
	9	Attu							x				
Capelin	7	Attu						x			This year there was plenty of capelin. They were even present until the end of July. The capelin was bigger this year.	The reason may be the sea temperature.	
	8	Attu						x					
	9	Attu						x					
Thick-billed Murre	7	Attu						x			Last year, just two thick-billed murres were observed at Qeqertaasaq in Nordre Strømfjord. This year there were approx. 500 breeding pairs.	The population is increasing in Nordre Strømfjord and is still rising.
