Coordinator's name			Per Ole Frederiksen				Year, quarter				3Q 2020		
Community (bygd)			Attu				Trend				Comments about number seen, size, first/last oberved, etc.	Significance and possible explanations of the trend	Recommendations for the management (perhaps explain on the seperate sheet
Species/impact	Month	Location	Total number of trips	Total number seen	Total catch	Mathod	No changes	Increasing	Decreasing	Don't know			
Caribou	7	Attu	60	1							This year they were fat. In August, we found several caribou skeletons at Qorloq.	In the last couple of years, tapeworms have been found in many caribou, which is perhaps one of the reasons why there are many dead caribou.	Recommendation: Catch time: 1 August - 30 September and in North Greenland 15 February 31 March.
	8	Attu	50	46			X						
	9	Attu	35	1						X			
Muskox	7	Attu									The trend is the same as last year.	This year musk ox hunting is a low priority.	Separate quota area is recommended: Ussuit nunaat - Eqalummiut and Epiutaarsuup as quota areas.
